

POSITIVE-ON-PULLAWAY TEST FOR BRIDGE PICKUP

Bridge pickup for Sustainiac GA-1 or GA-2 must have "positive-on-pullaway" polarity. This is not true for the new Stealth or Stealth PLUS sustainers. METER SHOULD MOVE TO (+), POSITIVE DIRECTION. IF NEGATIVE, THEN REVERSE THE GROUND/HOT WIRES.

(CAN USE OSCILLOSCOPE INSTEAD OF METER)

North magnetic pole of pickup must face guitar neck. If you don't want to turn the pickup around, you must reverse the magnet (which gets tricky). Also, reversing the magnet will reverse the electrical polarity.

"Old-fashioned" analog meter, not a digital meter.

PICKUP POLARITY TEST

("POSITIVE-ON-PULLAWAY")
